THE NEW RURAL ECONOMY

Site 29: Mackenzie, British Columbia

The community of Mackenzie is a resource-dependent, single-industry, “instant town”. Located in North-central British Columbia, the community was founded in 1966 in conjunction with the massive hydroelectric project which created the Williston Lake reservoir. The Mackenzie townsite was developed to be the processing centre for a regional forest industry. At present, two large sawmills (Abitibi-Consolidated and Slocan Forest Products), a pulp mill facility (Norske-Skog) and a pulp and paper plant (Abitibi-Consolidated) provide nearly all basic sector employment. With a local population (1996) of approximately 6,000 people, a support service and local administration economy has also developed. The town was planned and developed by the original forest industry company (British Columbia Forest Products) using new town planning principles.

As a centre for forestry activities, Mackenzie has certainly developed a significant industrial base including the recent addition of a number of value-added forest products firms. Economic diversification has been more limited.

Three “geographies” are important in local economic development planning: 1) dependence upon the forest industry sector continues, 2) its location about two hours drive north of Prince George generates considerable retail sector leakage, and 3) its location 20+ kilometres off the main highway has thus far limited opportunities to take advantage of passing tourist and commercial traffic. At present, community leaders and activists are working to expand and diversify the local economic base.
