

## Cisco 'AnyConnect' VPN Client

### Installing Concordia's 'AnyConnect' VPN client

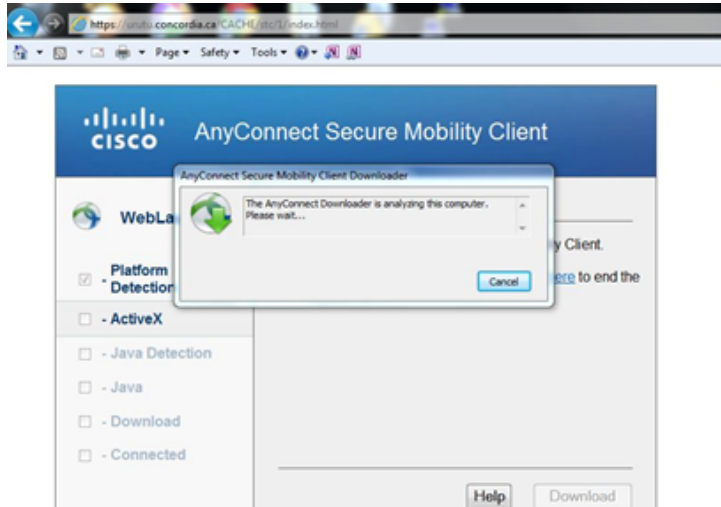

#### Step 1

In order to use Concordia's VPN service you must first install the Cisco 'AnyConnect' client. Open an internet browser and visit <https://urutu.concordia.ca>. Enter your netname and password and click 'Login' to establish the connection.

A screenshot of a "Login" dialog box. The dialog box has a title bar with a key icon and the word "Login". Inside the dialog, it says "Please enter your username and password." Below this text are three input fields: "GROUP:" with a dropdown menu showing "CONCORDIA", "USERNAME:" with a text box containing "Netname", and "PASSWORD:" with a text box containing seven dots. At the bottom of the dialog is a "Login" button.

#### Step 2

In most cases the download will start automatically after authenticating with your netname and password.

If the installation does not start automatically, you can manually install the client by clicking on the 'Windows7/Vista/64/XP' link.

After the download is complete the installer will be saved on your computer (location of your choice). Locate the installer software and click on it. Click 'Next' to proceed with the install.

### Step 3

Once the Cisco 'AnyConnect' software is installed on your computer, you will see the following icon.

### Connecting to Concordia's 'AnyConnect' VPN service

#### Step 1

To establish the VPN connection, click on the Cisco 'AnyConnect' icon.

Ensure that [urutu.concordia.ca](http://urutu.concordia.ca) is displayed on the screen and click on 'Connect'.

## Step 2

Enter your netname and password to authenticate to the VPN service. Click 'OK' to establish the connection.

You are now connected to Concordia's 'AnyConnect' VPN service.

## Disconnecting from Concordia's 'AnyConnect' VPN service

### Step 1

To disconnect from the VPN, click 'disconnect' on the client.

You are now disconnected from Concordia's 'AnyConnect' VPN service.
