

ENGINEERING AND COMPUTER SCIENCE CAREER FAIR

October 22 and 23, 2019

10 a.m. to 4 p.m.

Concordia Conference Centre, MB 9th Floor, 1450 Guy Street

October 30, 2019

10 a.m. to 4 p.m.

Student Success Centre, H-771, 1455 de Maisonneuve O.

For Engineering and Computer Science students and Alumni only.
Bring your student ID card.

CAREER FAIR SAMPLE QUESTIONS

Meeting the people who work in the industry you want to pursue a career in is an incredible learning opportunity. The questions you ask - and the answers you receive - will help you identify the steps you need to take to reach your goal. Keep these tips in mind:

- Ask open ended questions instead of closed questions which lead to a yes or no answer.
- Target questions appropriately depending on who you are speaking to.
- Prioritize the questions that are most important to you since you will most likely only have time for a few questions.
- Listen to what others are asking so that you do not ask the same questions.

QUESTIONS FOR THE ENGINEER

- Can you tell me about a typical day?
- Can you tell me more about the projects you are working on and what you find most challenging/rewarding?
- What skills and characteristics would the ideal candidate need to obtain a position?
- How well did university prepare you for the job? Are there courses or projects you recommend?
- What makes you stand out from your competitors?
- Can you recommend any professional associations/groups (including on-line forums)?
- What advice do you have for new graduates who want to work for your company?

QUESTIONS FOR HUMAN RESOURCES (HR)

- What are you looking for in a résumé?
- What additional training, skills or certifications do you recommend?
- How do you evaluate overseas experience?
- What top skills do employees have that make them successful in your company?
- Are there any internship opportunities? Job shadowing opportunities? When is the best time to apply?
- When is your peak hiring time?

- What types of positions do you have trouble filling? Why?
- What kinds of projects/challenges are interns given in your company? How are they evaluated?
- What are typical entry-level positions in this field? What duties and responsibilities do these positions entail?
- What is a typical career path in your company?
- What is the salary range for an entry-level position?

QUESTIONS FOR EITHER HR OR THE ENGINEER

- How important is French in your workplace?
- How can I obtain an interview with your company?
- What technical skills does one need to be hired for the position?
- Is a graduate degree necessary to advancing within your company? If so, which ones? Is a graduate degree considered an overqualification?
- What is the best way to follow up on my job application?
- Can we connect on LinkedIn?

CAREER FAIR TIPS

Career Fairs are a great opportunity to talk to companies and organizations directly and learn about job opportunities. The sooner you start planning your career, getting experience, and expanding your professional network, the better. Make the most of these networking opportunities by following these tips.

Research participating organizations

This is the most important tip. The more you know about the company the better prepared you are and the easier it will be to make a memorable connection with the representative. Before the event, find out as much as you can about their products, services, history and operations. Visit company websites. Check out their careers section. Prepare questions of what you would like to learn more about.

The full list of attending companies is posted on the career fair event page at concordia.ca/caps under the “Career Events and Fairs” section. Check the CAPS job bank for employer postings at: concordia.ca/students/success/career-planning-services/job-bank

Dress appropriately and practice good hygiene

Your attire should be clean and neat. Avoid casual clothing, such as jeans, t-shirts, running shoes and baseball caps. You want to be remembered for what you said - not what you wore. Wear comfortable shoes. Avoid chewing gum. Be sure to shower and use deodorant, but avoid colognes, perfumes or heavy make-up. Leave your backpack at home or in your locker.

Arrive early

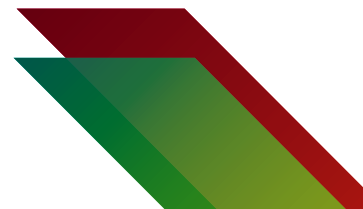

Come early to avoid long wait lines. Company representatives will be alert and have more energy than later in the day.

Budget your time wisely

Prioritize companies you are interested in, but keep all of your options open. Be aware that other students will be attending the fair, and try not to monopolize representatives. While you wait in line, listen to questions other students are asking, you'll avoid repeating questions and will be able to move on to more interesting questions when it's your turn to speak. Take time to network while you wait and talk to fellow job seekers. Who have they talked to? Have they heard of anyone hiring someone with your background?

Talk to employers about yourself and ask questions

Prepare your elevator pitch ahead of time. Introduce yourself and let employers know what skills you enjoy using and the kinds of problems you like to solve. Find out what key skills employers are looking for and be prepared to talk about how you used these skills successfully in projects, internships, tech events or past jobs. Ask questions to show your interest and to find out information that can help you better tailor your application to the company.

Don't overlook companies assuming they hire only from one discipline

Organizations need people with skills from a variety of academic majors. At the fair, ask whether the organization hires people from your major and for what positions.

Bring copies of your resume, a notepad and a pen.

These networking tools should be in a portfolio instead of your schoolbag. Jot down brief notes as you leave each booth. Record your impressions and items needing following up. Ask for a business card. Make note of recruiter's name as this can help for your follow-up after the fair.

Be friendly and positive

Networking at fairs is as much about what you say as it is about your body language. Be prepared to smile, shake hands firmly, and make eye contact with company representatives. Be yourself when interacting with employers; be enthusiastic. Use body language to show interest: stand straight and uncross your arms. Good posture and being attentive help you look excited and enthusiastic. Fairs tend to be noisy events so make sure you project enough when you speak.

Have your LinkedIn profile up-to-date

More and more recruiters are using LinkedIn to find candidates. Have your LinkedIn profile ready so you can connect with recruiters after the fair. You can include your LinkedIn information on your résumé. Ask recruiters if they are willing to connect with you through LinkedIn. Be sure to send them a request shortly after the fair if they accept! Don't forget to include specific details of your conversation in your LinkedIn message to help them remember you. Use LinkedIn to follow companies and to look up employees or interns working there.

After the fair

Mail a "Thank You" letter to employers you remain interested in. It helps you stand out from the crowd and brings positive attention to your name. Include information about your conversation and your interest in the company. File all of the brochures, annual reports, and other materials you received from employers with your job search materials. This information can shave hours off your interview preparation. Make a note of the companies you need to research further. Meet with a CAPS career advisor to help you plan your next steps.

Agriculture and Agri-Food Canada provides leadership in the growth and development of a competitive, innovative and sustainable Canadian agriculture and agri-food sector. The activities of the Department range from the farmer to the consumer, from the farm to global markets, through all phases of producing, processing and marketing of farm, food and bio-based products. Agriculture is also a shared jurisdiction in Canada, and the Department works closely with provincial and territorial governments in the development and delivery of policies and programs. Agriculture and Agri-Food Canada (AAFC) offers a variety of exciting careers in a number of disciplines. AAFC is proud to celebrate our achievement in creating an inclusive, respectful, and positive workplace where all employees are valued and recognized for their unique skills, ideas, voices and perspectives.

Algolux is a leading computer vision technology startup, headquartered in Montreal, with offices in San Francisco and Munich. Our mission is to enable autonomous vision-empowering cameras to see more clearly and perceive what cannot be sensed with today's imaging and vision systems, using machine learning and artificial intelligence. Our team loves to push the limits, but we value supportive collaboration, intellectual curiosity, and empowerment. A powerful mix that is critical to scaling up our company. Our open office environment encourages communication, teamwork, and a culture of mutual trust and respect. We work hard, but we don't take ourselves too seriously either and we always make room for fun along the way. We're looking for exceptional individuals to help us achieve breakthroughs in deep learning, computer vision, and computational imaging.

We are a boutique consulting firm that helps businesses optimize and streamline their processes by implementing cutting-edge cloud ERP (Enterprise Resource Planning) and CRM (Customer Relationship Management) systems. Our highly skilled team works hand in hand with organizations to achieve exceptional business improvements allowing them to focus on what they do best rather than on repetitive manual processes, spreadsheet management, and other non-value-added activities.

At Big Bang ERP you will do more than just software development; you will interact directly with clients and deliver solutions to them. You will also have the chance to start contributing from day one. We understand that the transition from school to the workplace can be intimidating, so we will also have a dedicated and experienced mentor assigned to you. This mentor will help you with both the technical and professional side of the business, so that you can maximize your experience.

At Nuance, we empower people with the ability to seamlessly interact with their connected devices and the digital world around them. We are creating a world where technology thinks and acts the way people do by designing the most human, natural, and intuitive ways of interacting with technology.

Our nimble technology uses analytics and advanced algorithms to transform the inanimate into animate and reduce complicated processes into simple ones.

Join our Healthcare team...caring for clinicians the way they care for patients. Beyond words. We create technology that lets clinicians capture and document care quickly and easily so they can focus their attention on their patients.

Join our Automotive team - intelligent systems now ready for the road. We are passionate about developing intelligent interfaces that enable people to talk to their cars, phones, devices, and other smart 'things'.

Join our Enterprise team - great customer service starts here. We design virtual assistants for intelligent and effortless customer service helping customers find the information they need using whatever channel they prefer.

We are searching for Top Talent Students to join our world class Team. As part of our ongoing investment to expand the Montreal Internship Program, our internships offer students an exciting path to contribute to cutting edge technology & innovative products and make a true business impact.

As a key member of our team, you will expand your technical skills exponentially, grow your professional network & work alongside some of the best and brightest in the world!!!

Omnirobotic is developing Autonomous Industrial Robots. Like autonomous cars, autonomous robots can see their environment, plan and execute a given task by themselves. Unlike current industrial robots, no one has to teach autonomous robots the required sequence of actions or how to move. Omnirobotic is developing Artificial Intelligence so that robots can understand processes, not only repeat an instructed motion. This AI makes them able to perform tasks on any products in real time. As these robots don't need to be programmed, they can be used on small production lot, even lot of one. Our first product, the OmniPainter, is adapted to continuous flow finishing lines operation, supporting both powder and liquid coating application. They know how to paint anything!

Looking for: Software Developer

Premier Tech (PT), its 95 years of passion, with over 4 500 team members in 27 countries. That's right, team members, not employees. Through the teamwork of our three groups (Horticulture and Agriculture, Industrial Equipment, Environmental Technologies), we keep growing, all around the world. We are intrapreneurs* at heart. We constantly challenge the status quo in order to push our limits. We are not afraid of taking calculated risks, never shying away from our mistakes along the way. Dedicated to always learn from our actions, we seize all growth opportunities, even the painful ones, sharing with each other the knowledge of our successes (which we always celebrate!) and failures. All together, we are deeply committed to excel at what we do. We are the Premier Tech team.

We are dedicated cloud evangelists, raring for the opportunity to invest time, energy and enthusiasm into our clients' business.

As a Salesforce consulting and app development firm, Traction on Demand looks to hire individuals who are enthusiastic about using technology to innovate and create new solutions for existing business challenges. But relevant skills aren't the only thing we look for. In fact, we prioritize cultural fit, intelligence and problem solving above relevant skills. We are building this community with committed 'A-players' who think about how they can create something amazing for both our clients and the communities we partner with. Interesting and exciting projects are the rule, not the exception.

We are simply looking for a great bunch of candidates eager to learn and are on the same mission as we are which is to "Do The Right Thing."

Shared Services Canada (SSC) transforms how the Government of Canada (GC) manages and secures its information technology (IT) infrastructure. It also provides modern, secure and reliable IT services to GC organizations to deliver efficient digital programs and services for Canadians. SSC updates and manages government networks, equipment and security. Its responsibilities include cloud and data storage systems to protect Canadians' information. It enables Internet access and contributes to improving cyber security.

Maintaining strong customer relationships and service management is essential to the successful delivery of SSC's mandate. Working in collaboration with its counterparts and the IT industry, the SSC team enables GC operations. Each time Canadians cross the border, check the weather or file their taxes, SSC employees are there working behind the scenes.
