

# **Concordia Facilities Management**

## **Water use and reduction program**

### **-Scope-**

In keeping both with the environmental and service commitments of the university, the following document outlines Concordia University's program on the distribution and tracking of potable water in its buildings. For more information, please contact the department of Facilities Management.

### **-Program-**

- 1) All buildings will be fitted with a new water meter before December 31, 2018. These meters will be read at regular intervals, either remotely or in person, in order to track Concordia's domestic water use. The data collected will be compiled into a yearly report, published in the month of June.
- 2) A website will be made available to the Concordia community that contains information about Concordia's water consumption. Resources will also be made available to improve occupant engagement and facilitate the process of reporting water use related problems.
- 3) Existing equipment and fixtures will be replaced or updated to meet a 20% reduction in water consumption before December 31, 2016 (with respect to figures from March 2013).
- 4) The purchase and/or installation of any device that uses potable water directly for cooling is strictly prohibited.
