## **Department of Mathematics & Statistics** Concordia University

	STAT 360 (MATH 601D) Linear Models Fall 2015		
Instructor*:			
Office/Tel No.:			
Office Hours:			
*Students should get the above information from their instructor during class time. The instructor is the person to contact should there be any questions about the course.			
Course Examiner:	Dr. D. Sen		
Text:	Applied Linear Regression Models, 4th Edition, by Kutner, Nachtsheim and Neter, McGraw Hill-Irwin, 2004.		
Calculators:	Only calculators approved by the Department (with a sticker attached as a proof of approval), such as <b>Sharp EL 531</b> or the <b>Casio FX 300MS</b> , available at the Concordia Bookstore, are permitted for the class test and final examination. See <u>https://www.concordia.ca/content/dam/artsci/math-stats/docs/AppCalculatorList.pdf</u> for a list of Approved and Not-Approved calculators.		
Final Grade:	<ul> <li>a) Assignments (12%)</li> <li>b) Two mid-term tests (40%)</li> <li>c) Final examination (48%)</li> </ul>		
Important:	<ol> <li>Please note that there is no"100%" final exam option in this course.</li> <li>Mid-term test missed for any reason, including illness, cannot be made up. If you miss midterm because of illness (to be confirmed by a valid medical note), the final exam can count for 88% of your final grade.</li> <li>Mid-term test I will be held on October 8, 2015 and the mid-term II will be held on November 5, 2015. These exams, as well as the final, will be closed book exams.</li> <li>Please note that there are no supplemental privileges in this course.</li> </ol>		

Week	Sections	Topics to be covered
1	1.3, 1.6, 1.7, 1.8	Simple linear regression models; estimation of regression function;
		estimation of error term variance; normal error regression model.
2	2.1, 2.2, 2.4	Estimation of $\beta_0$ and $\beta_{1i}$ interval estimation of E (Y <sub>h</sub> ).
3	2.5, 2.6, 2.7	Introduction to MINITAB, prediction of new observation; confidence
		band for regression line; ANOVA approach to regression analysis.
4	2.8, 2.9, 3.2	General linear test approach; coefficient of correlation; residuals.
5	3.3, 3.7	Diagnostics for residuals; F-test for lack of fit.
	MID-TERM I	MID-TERM I will cover material up to section 3.7.
6	4.1, 4.2	Joint estimation of $\beta_0$ and $\beta_1$ ; simultaneous estimation of mean
		responses.
7	4.3, 4.4, 5.6	Simultaneous prediction intervals for new observations; regression
		through origin; inverse of a matrix.
8	5.8, 5.9, 5.10	Random vectors and matrices; differentiation of a vector and scalar
		function of n x n matrix; simple linear regression model in matrix
		form. Least square estimation of regression parameters.
9	5.11, 5.12, 5.13	Fitted values and residual; ANOVA results; inferences in regression
		models.
	MID-TERM II	MID-TERM II will cover material section 4.1 to section 5.13.
10	6.1, 6.2, 6.3	Multiple linear regression models; general linear regression model in
		matrix terms; estimation of regression coefficients.
11	6.4 - 6.7, 6.8, 6.9	Fitted values and residuals; ANOVA results; inferences about
		regression parameters; inferences about mean response and
		prediction of new observation; diagnostics and remedial measures.
12	7.1, 7.2, 7.3	Extra sum of squares; application of extra sum of squares; tests
		concerning regression coefficients.
13	7.4, 7.5, 7.6	Coefficient of partial determination; standardized multiple regression
		models; multicollinearity and its effects.
	Review
