Course Description: This course introduces first year engineering students to the theory and of ordinary differential equations and their applications to mathematical models.

The main topics include: Basics of general theory of differential equations; special types of first order equations (separable, linear, exact, homogeneous, Bernoulli); linear equations of higher order (homogeneous and non-homogeneous); Cauchy-Euler equations; non-linear equations of second order; systems of linear differential equations; linear and non-linear mathematical models of first and second order.

Lectures: three hours per week. Tutorial: two hours per week. NOTE: Students who have received credit for EMAT 212 and 232 may not take this course for credit. (Prerequisite: MATH 204 (cégep Mathematics 105) previously or concurrently; MATH 205 (cégep Mathematics 203)).

Textbook: Advanced Engineering Mathematics, by Dennis G. Zill and Warren S. Wright, 5th Edition, Published by Jones and Bartlett, 2014.

Grading Scheme:

Midterm exams (2)	20%, (10% each, during tutorials, 90 min, 5 problems)
Assignments (WeBWorK)	10%
Pop-up Quizzes (5)	10% (2% each, during lectures or tutorials, 20 min, 1-2 problems)
Final exam	60% (3 hours, 10 problems including 2 problems on mathematical models)
Team projects (2)	5% (2.5% each, 1 problem on mathematical models, 1 hour; during tutorials in teams of 2)

WeBWorK: Every student will be given access to an online system called WeBWorK. Students are expected to submit assignments online using WeBWorK. Late assignments will not be accepted. Assignments contribute 10% to your final grade. Working regularly on the assignments is essential for success in this course. Students are also strongly encouraged to do as many problems as their time permits from the chapters of the textbooks listed below in this outline.

The grading scheme implies 5% bonus.

YOU MUST PASS THE FINAL EXAM (50% or better) TO PASS THE COURSE

If the student misses one mid-term test for any reason, including illness, then the final examination will

count for 70% of the final grade. Since there is a 5% team projects bonus allocation, there will be no replacements of quizzes for any reason, including illness. Students are responsible for finding out the date of the final exam. The Examination Office posts the time and place of the final exam once the schedule becomes available. Any conflicts or problems with the scheduling of the final exam must be reported directly to the Examination Office. Students are expected to be available until the end of the final examination period. Conflicts due to travel plans will not be accommodated.

PLEASE NOTE: Electronic communication devices (including cellphones) will not be allowed in examination rooms. Only "Faculty Approved Calculators" will be allowed in examination rooms [SHARP EL-531 or CASIO FX-300MS]

Topics and recommended problems:

- Week 1:** 1.1 Definition and Terminology; problems: 1,3,5,6,8,10,11,13,14,21,23
 1.2 Initial Value Problems; problems: 7,9,11,12,17,18
 2.1 Solution curves without a solution; problems: 3, 4, 26, 27 **Week 2:**
 2.2 Separable Equations; problems: 7,9,13,19,25,27
 2.3 Linear Equations; problems: 7,9,23,27,31
 2.4 Exact Equations, integrating factors; problems: 3,5,9,15,27,29,31
- Week 3:** 2.5 Solutions by Substitution (Bernoulli, homogeneous, linear substitution);
 problems: 5,7,9,13,17,19,21,25,27
- Week 4:** 1.3 Differential Equations as Mathematical Models;
 problems: 1,2,3,5,7,9,10,13,15,16,19
 2.7 Linear models (growth/decay, heating/cooling, circuits, mixtures);
 problems: 3,5,9,15,17,23,25,29,31
- Week 5:** 2.8 Non-linear models (Population dynamics, logistic equation, chemical
 reaction, leaking tank); problems: 2,3,11,13,17
 17.1 Complex numbers; problems: 1,3,7,11,15,25,27,29,31,35,39
- Week 6: Midterm 1 (tutorials) on material of Weeks 1-4**
 17.2 Powers and Roots; problems: 3,7,9,15,21,31,33,35
 3.1 Theory of Linear Equations; problems: 1,9,23,27
- Week 7:** 3.3 Homogeneous Linear Equations with Constant Coefficients
 problems: 3,5,9,13,15,17,21
 3.4 Undetermined Coefficients; problems: 1,3,7,11,15,19,23,31
- Week 8:** 3.5 Variation of Parameters; problems: 1,13,15,23
 3.6 Cauchy Euler Equations; problems: 5,7,11,23,45
- Week 9:** 3.7 Nonlinear Equations, Reduction of Order; problems: 3,7,9
 3.8 Linear Models. Initial Value Problems (mass-spring systems, free motion)
 problems: 1,7,12,21
- Week 10:** 3.8 Linear Models. Initial Value Problems (driven motion and LRC-circuits)
 problems: 31,33,45,47,49
 3.11 Non-linear models (telephone wires, rocket motion, pulled rope)
 problems: [Projects to be assigned]
- Week 11: Midterm 2 (tutorials) on material of Weeks 5-9**
 5.1.2 Power Series Solutions; problems: 17,21,27
 10.1 Theory of Linear Systems; problems: 1,3,7,18
- Week 12:** 10.2 Homogeneous Linear Systems; problems: 1,3,7,9,21,31,35,37,48
 10.4 Non-Homogeneous Linear Systems; problems: 1,3,7,17,30
- Week 13:** Review

GRADUATE ATTRIBUTES

ENGR213 emphasizes and develops the CEAB (Canadian Engineering Accreditation Board) graduate attributes and indicators:

COURSE LEARNING Outcomes (CLOs)

Upon successful completion of ENGR213, the students will be able to:

- Solve differential equations that will be essential knowledge to many engineering core courses.
- Model engineering problems in circuits or mechanics using differential equations. Through solution extract all the pertinent information *vis-à-vis* the physics and practicality of the problem. This component is examined through an applied problem in the final exam.
- Learn how to work within a team. This is done through one or two Team Projects.
- Acquire new knowledge by self-study. This is accomplished by making students responsible for certain material on assignments and exams, without that material being lectured on.

Students are also responsible for topics covered in assignments that have not be presented in either the regular lectures or during tutorials.

In the event of extraordinary circumstances beyond the University's control, the content and/or evaluation scheme in this course is subject to change.
