Instructor: Dr. Frédéric Godin, Office: LB 921.05 (SGW), Phone: 514-848-2424, Ext. 3494
Email: frederic.godin@concordia.ca

Office Hours: TBA

Class Schedule: Tuesday-Thursday, 16:15-17:30 in H 400-2, SGW Campus.

Outline: This course is an introduction to mathematical and computational finance. The focus is on the general theory through a thorough study of Binomial Models. The topics covered include:

- The binomial no-arbitrage price model: one-period, multi-period;
- State prices: change of measure, Radon-Nikodym derivatives, capital asset pricing model; utility maximization and optimal investment
- European and American derivative securities: call and put options, stopping times; exotic derivative securities
- Random walks: first passage times, reflection principal; perpetual American put option
- Interest-rate derivatives: binomial model for interest rates, bonds, fixed income derivatives, forward measure; Ho-Lee and Black-Derman-Toy models
- Forward and Futures contracts;
- Hedging: the Greeks, Delta hedging.
- Convergence of the Binomial Model to the Black-Scholes model. The Black-Scholes Formula.
- Numerical methods

Evaluation: Weighted average of Assignments (20%), Midterm Examination (35%), and the Final Examination (45%). Some assignment problems will require programming. Although examples presented in class will be programmed either in R or Matlab, students are allowed to use C++ or Java during assignments, as these are the industry standards for Quantitative Finance.
