Caution: These findings vary up to 8%!

When conducting a study that involves a sample, researchers are cautious about how they interpret the results. This is because they can never be certain that the findings will represent the whole population from which the sample was drawn. For this survey, the 'whole population' is represented by the total number of households found within each selected NRE site. When you are reading these results, please keep in mind that any of these findings could vary by 8%.

WHAT DID WE LEARN IN 2001?

This is the fifth year of the New Rural Economy Project (NRE). It is an exciting time, since we are now reaping the fruits of our collaboration and hard work. This document is a small part of the harvest.

You will find two major sections in this booklet.

Ray Bollman (StatCan), Tom Beckley (UNB) and Bill Reimer (NRE)

The NRE Houshold Survey 2001. This first section presents a selection of results from our household survey conducted last summer. From May to July, we knocked on doors in 21 of our NRE sites and spoke to people in just under 2000 households. They gave generously of their time and expertise to inform us about their community activities, household organization, challenges, and options regarding a range of rural issues. We have selected a few of the results so you can compare your community to others in your region and across the nation.

The NRE in the Global context. This section fills you in on NRE events across the nation and around the world. Through its parent organization, the *Canadian Rural Revitalization Foundation* (CRRF), we enjoy the support of many other national and international groups. They help us understand how local events and challenges can be rooted in more global processes such as the changing demand for our resources, the introduction of new technologies, or the implementation of policies affecting economic and social programs.

Our collaboration is long-term. After four years of working together, we are enjoying a level of exchange that is exceptional for both our research and education objectives. I was particularly pleased to meet representatives from 15 of the NRE sites who joined us at the CRRF Annual Conference in Muenster, Saskatchewan last October. For three days we compared experiences, visited local projects, and enjoyed each others' company as we searched for new ways to improve the lives of rural Canadians. We invite you to join us this fall at our next meeting in Miramichi, New Brunswick (October 26th to 29th).

This booklet is prepared as part of our continuing discussion about the condition and future of rural Canada. We ask you to read it – not as a finished document – but as a basis for discussion. Let us know whether it makes sense from your point of view – whether it helps you understand what is happening in your community or whether we have overlooked something important. Write us a letter, give us a phone call at (514) 848-2139, e-mail us with your comments (nre@vax2.concordia.ca), or leave them on our web site (http://nre.concordia.ca). We will visit your community whenever we can – keep an eye out for us.

Dr. Bill Reimer NRE Project Director The NRE Project, Concordia University, Dept. of Sociology and Anthropology, 1455 boul de Maisonneuve O., Montréal QC H3G 1M8

IMPRESSIONS FROM THE NRE 2001 HOUSEHOLD SURVEY TEAM

Seguin, ON

I should like to thank you for participating in the New Rural Economy study.

Background:

In the summer of 2001, the New Rural Economy Project studied twenty sites in rural areas across Canada with a very detailed questionnaire. As our part of this study, Sigrid van de Kamp (a graduate student at Laurentian) and I arranged to carry out interviews with residents of Seguin. So that we could compare with other Census Subdivisions selected across Canada from the 1991 census, we specifically targeted those who lived within the administrative boundaries of the former Township of Humphrey.

Prior to this specific research, Sigrid and I had made two presentations to Seguin Council describing the New Rural Economy Project, and soliciting suggestions and ideas that could be included in the research. I do thank the councillors for their support and interest in the research.

The Summer Work:

We were most fortunate to be able to hire Lillian Rachar to work with us on the project to set up the interviews. This proved to be a challenging task as many residents were seasonal and therefore many phone calls had to made to permanent residences elsewhere in order to set up appointments. In some cases, Sigrid needed to take a water taxi in order to get to her scheduled interviews. It took the whole summer, but eventually we completed the 127 interviews required by the research project.

The Analysis:

I have presented a paper on the Buckner Scale, a measure of social cohesion in communities. In general, smaller communities are more cohesive, so one would expect that Seguin would score low on this scale. Additionally there are many summer residents in our survey that also would lead us to expect Seguin to have a low score. Yet Seguin scored 3.82 on the scale that varies from 1 to 5 with 5 being the maximum possible result. Even though Seguin was larger and had more seasonal representatives, this is among the top half on social cohesion of the communities studied, quite a good result.

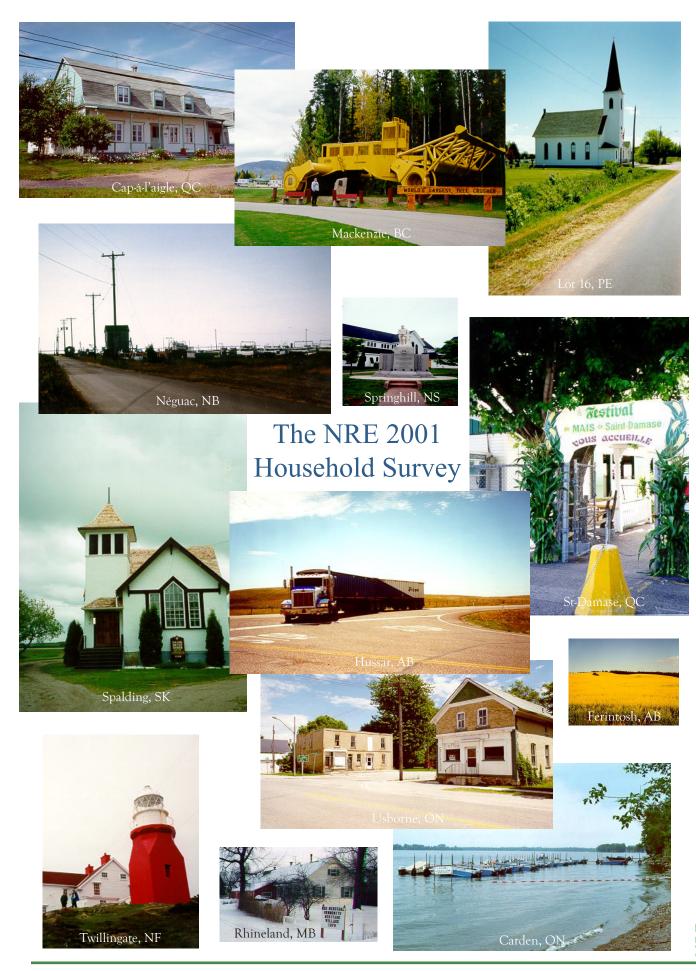

Plans:

There is so much data that it will take a huge amount of work to do all the analysis. I am looking forward to working on this, and plan to present the results of some of this analysis at a Council meeting.

If you have any questions or comments on any matters relating to the research, please get in touch with me by email at dwilkinson@nickel.laurentian.ca or phone me at 705-675-1151 Ext 3212 or visit the NRE website at nre.concordia.ca.

Derek Wilkinson, Site Coordinator

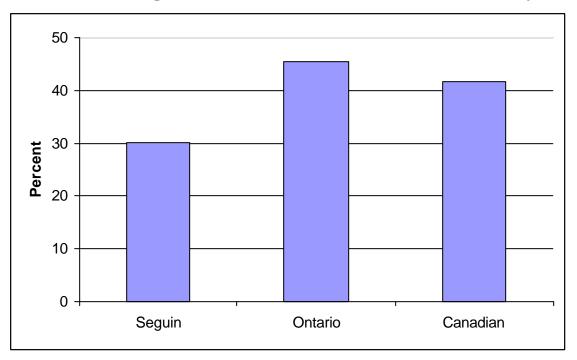

Community Inclusion and Cooperation

One of the things that we tried to measure using the survey was 'Social Cohesion'. By social cohesion, we mean the extent to which people respond collectively to achieve the outcomes they desire, and to deal with the economic social political or environmental stresses that affect them. It is difficult to measure this, but one way is to find out how residents feel about the cohesion within their community. Another way is to measure how the community works together to provide basic needs and services. This is discussed in the section titled 'Doing Things for Ourselves and Others'.

Respondents were asked how strongly they agreed or disagreed with statements such as: "I feel like I belong in this community", "I believe my neighbours would help me in an emergency" and "I regularly stop and talk with people in my community". The answers we received helped us to understand how the community viewed itself, and if they felt the community was able to work together to achieve success.

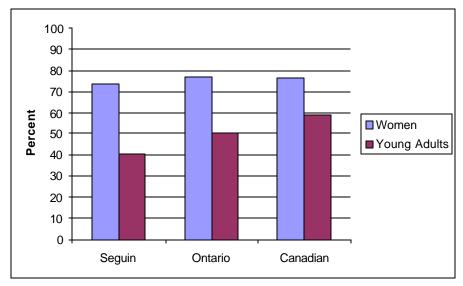

Perceived High Levels of Social Cohesion in the Community

In looking at the above bar chart we find that 30% of the respondents in Seguin feel that the community has a high level of perceived social cohesion compared to 46% for other NRE sites in the Ontario and 42% for the total Canadian sites.

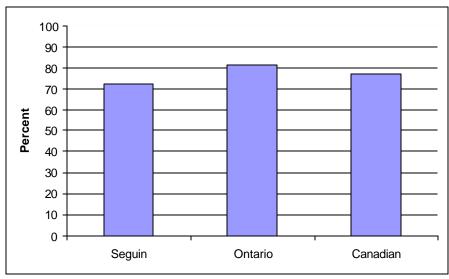

Given that residents describe their community social cohesion levels as relatively low, it may be beneficial to organize more community-based events in order to increase the sense of fellowship. Neighbourhood activities that bring people together such as community festivals and celebrations can also potentially increase the community's social and economic well being.

Perception of Leadership Opportunities for Women and Young Adults

Respondents in Seguin view their community as being open to leadership opportunities for both women and young adults. In the graph above 74% of the respondents say that the community has leadership opportunities for women and 41% of respondents say that the same is true for young adults. Although slightly fewer Seguin respondents felt that their were leadership opportunities for young adults in comparison to the other Ontario NRE sites and the total Canadian sample of sites, a similar percentage of respondents in all categories felt there were leadership opportunities for women.

Perceived Ability of Community to Work Together

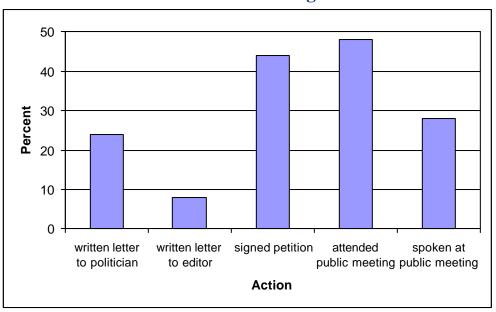

Residents of Seguin feel that community members are willing to work together towards a common goal. In the above graph 73% agreed that the community was able to work together, in comparison to 81% of respondents in the Ontario sites and 77% of the total Canadian sites. This data suggests that Seguin is a community that is able to work together and that leadership opportunities for both women and young adults within the community may contribute to the community's ongoing success.

Taking Action in the Community

As part of the summer survey, we were very interested in how people express their concerns about community issues. To measure this, we asked respondents if they had written a letter to their Mayor, Provincial or Federal government representative, or to a newspaper editor. We also asked if they had signed a petition, attended or spoken at a public meeting in the 12 months previous to the interview.

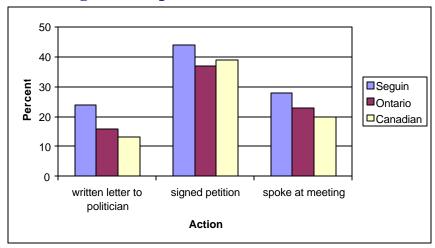

Action Taken in Seguin

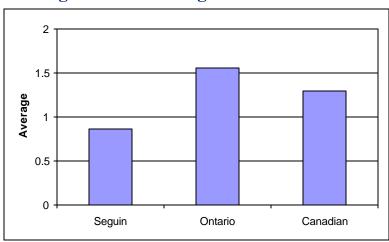

The graph above shows hat in Seguin, 24% of respondents wrote letters to the Mayor, Provincial or Federal representative and 8% wrote letters to a newspaper editor. In addition, 44% reported signing a petition, 48% of respondents attended a public meeting and 28% had spoken at a public meeting.

As can be seen in the graph below, the actions taken in Seguin are similar to those taken in Communities in both the Region and the rest of Canada, although they write more letters to politicians than other communities. In most cases, respondents were much more likely to attend and speak at meetings, or sign petitions than they were to write letters stating their opinion. Public meetings and petitions are excellent ways of sharing information, gathering public opinion, and reaching a consensus within a community. It is also important that other avenues are used to express opinion, especially those that inform external decision makers

Action in Seguin Compared to Ontario and Canadian Sites

Average Number of Organizations Per Person

In order to understand how a community works together, we measured how many voluntary organisations people within the community belonged to. These might be social clubs, religious groups, or any other type of organised meeting. We took an average per person of the number of groups attended, in order to make the comparison between communities shown in the graph above.

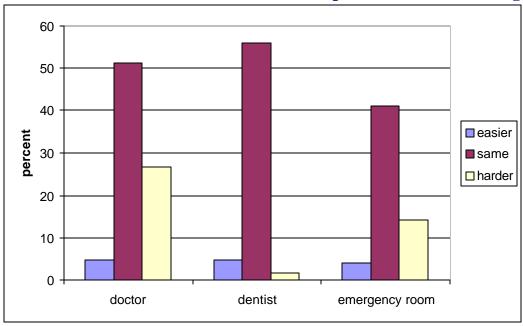

Small groups and communal activities, whether formal or informal, offer a value to the community. While the measure can never be perfect, the number of voluntary organisations that people belong to is a way of understanding the level of social cohesion in a community.

Services In The Community

The basic services that a community receives are key to the quality of life enjoyed by the members of that community. In order to understand them, we looked at the availability and use of basic services such as health care, education, safety and recreation. We asked people to rate if they considered the services to be good, and if they had improved or worsened in the last five years.

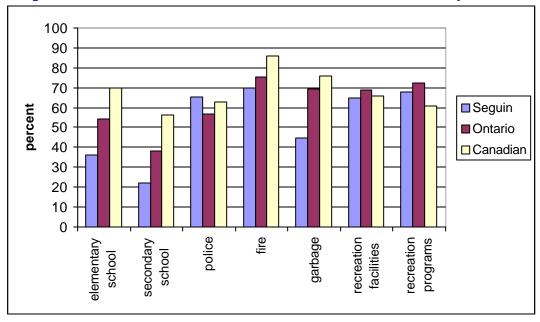

The residents of Seguin described some deterioration in access to health services in the past five years. As is seen in the graph below, in the case of doctors, 27% reported access being more difficult than five years ago. In the case of the dentist, residents described very little change. Although fewer respondents had experience with emergency services, 14% reported finding it harder to access an emergency room than five years ago. This suggests that the quality of health care in Seguin has declined somewhat in recent years.

Opinions About Health Service Access Compared to Five Years Ago

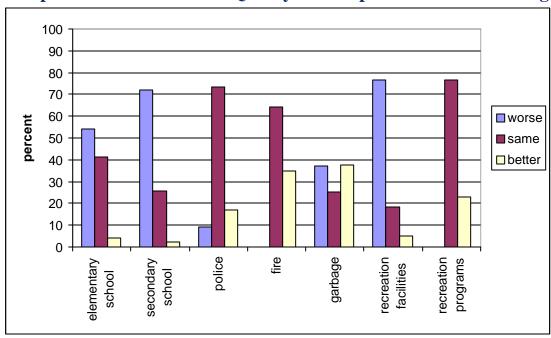

People in Seguin also expressed some dissatisfaction with the quality of other local services. In fact they were on the whole less satisfied than the other Ontario sites and the total sample of Canadian sites. As is shown in the graph on the next page, only 22% described the elementary schools as "good" or "very good" versus the overall rate of 54% in the Ontario sites and 70% in the Canadian sites. The other service which scored low was garbage, with a 45% approval rate. The services respondents were most happy with are fire, recreation and police. 70% of respondents reported that fire services are either "good" or "very good".

Respondents who Describe Services as "Good" or "Very Good"

Respondents were asked if these same ærvices have changed over the past 5 years. As is seen in the graph below, most respondents felt that services have either stayed the same or have become worse. The most improvement was seen in the areas of recreation programs, garbage, and fire services. The greatest decline identified by respondents was the case of schools and recreation facilities. Over 70% of respondents reported that the secondary schools and recreation facilities are worse now than 5 years ago. Our results indicate that residents of Seguin are not satisfied with the quality of some services.

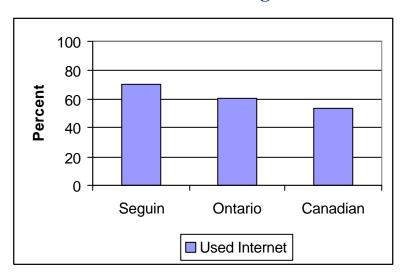

Perceptions of Local Service Quality as Compared to Five Years Ago

Internet in the Community

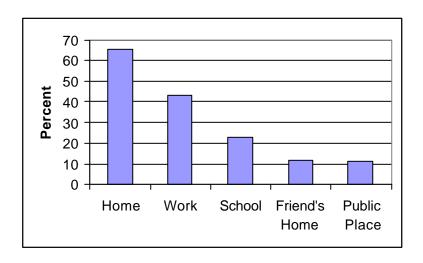

Part of this summer's survey looked at the community's use of the Internet. Questions we asked have helped us to better understand how many people in Seguin use the Internet, where it is used, what for, and opinions about it.

Internet Use in Seguin

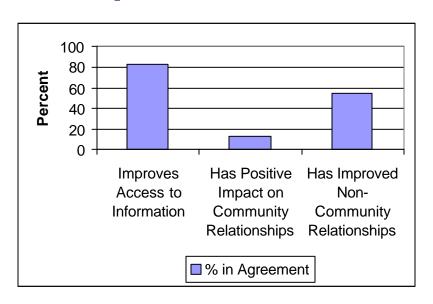

This table shows the percentage of people who use the Internet in Seguin, the Ontario sites, and in all 20 Canadian sites. Here we can see that approximately 70% of the people surveyed in Seguin used the Internet. This rate of use is slightly higher than both the regional and Canadian averages suggesting that Seguin is well connected. In fact, of all of the sites surveyed across Canada, Seguin had the second highest level of Internet use. By adding computers and Internet access to other locations in Seguin and promoting existing public spaces to surf the web, people who may not have access within the home may also be encouraged to get online. Also, holding "How To" sessions on Internet and computer use for various groups such as the seniors club or youth groups, may allow even more people to feel at ease using these technologies and build upon their existing knowledge.

Locations for Internet Use

The previous graph shows where people in Seguin tend to use the Internet. The most common place is at home and the least common places are at the home of a friend or relative or a public location such as a library or community centre. The top three locations being home, work and school suggest that people of different ages and occupations can get online and access the information they need.

Opinions About the Internet

This last graph depicts how people in Seguin feel about the Internet and its impact on Only 13% of those people interviewed think that the Internet has a positive impact on their relationships with people inside the community which could suggest that people prefer to communicate in different ways with other people from within Seguin. 55% of the people interviewed in Seguin felt that the Internet has improved their relationships with people outside of the community. 83% of respondents felt that the Internet has improved their access to information. The fact that so many respondents feel that the Internet has improved access to information may reflect people's growing knowledge about navigating through the World Wide Web and an increased comfort level with this technology. Again, "How To" sessions held within the community may help even more people to learn about searching for the information they need and want, and becoming familiar with various advanced search engines, municipal, and national web sites can often help people to find what they are looking for. The existence of the Seguin web site may also be contributing to people's positive feelings about online access as it provides a valuable source of local information. Promoting this web site and expanding it to include more details about local events, news, current issues, meetings, and fundraisers can allow people to find out even more about what is important to them locally. This type of access not only informs people, but can also bring people together from various parts of the community who may not normally have a chance to interact – certainly a benefit to social cohesion and community spirit.

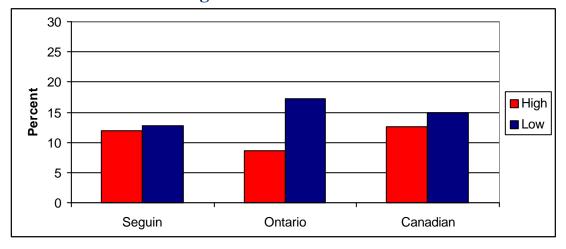

Personal Stress and Household Changes

Changes in personal circumstances, and the stresses that these cause, have a great effect on the residents of any community. In order to understand the changes in a community, and how it was dealt with by the residents, we asked a series of questions about the types of change seen in the last year, how they coped with the change, and whether life in the community was stressful or not. Examples of changes discussed included health, financial, legal, family relationships and child care.

Our survey found that 12% of residents in the community of Seguin described their lives as being very stressful. Across the four rural Ontario communities surveyed, levels of high stress ranged from a low of 6% to this high of 12% in Seguin. The Canadian average indicated that 13% of the population described their lives as being very stressful across the 20 rural communities surveyed.

Furthermore, about 13% of respondents in Seguin indicated that they had no stress in their lives at all. This proportion is similar to the Ontario and the Canadian who reported no stress in their lives.

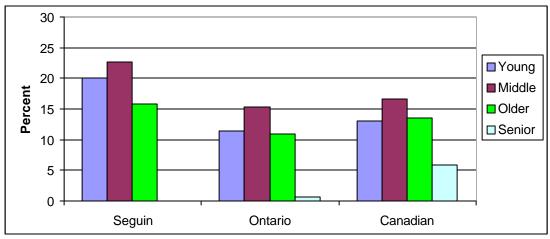

Examining the Levels of Personal Stress

The age of an individual also plays an important role in their level of personal stress. In general, our research across Canada indicated that stress levels tended to peak by middle age (35 to 49 years old) and then began to decline in later stages of adulthood.

In community of Seguin, high stress levels peaked among middle-aged adults with about 23% of these respondents indicating that they were very stressed (as indicated in the graph on the following page). Remaining consistent with rural Canadian and Ontario trends, seniors (65 years old and up) in Seguin had the smallest proportion of stressed individuals across the age groups surveyed. In fact, there were no seniors in Seguin who reported high levels of stress in their daily lives.

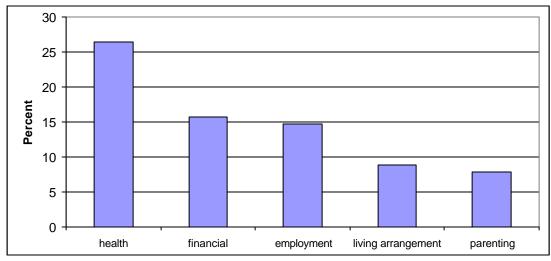

Examining High Levels of Stress Across Various Age Groups

Household Changes

Households experience many different types of changes throughout the course of a year and the impact of each of these changes varies from household to household and from one community to the next. In the community of Seguin, 80% of households experienced at least once change over the past 12 months. Of these households, approximately 1 in 4 reported that a health change had the greatest impact on their household. Financial and employment changes followed, each impacting about 15% of households in Seguin.

Changes That Had the Greatest Impact on Households in Seguin

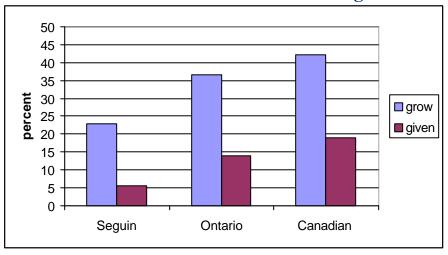

The fact that financial and employment changes were among the top three major changes experienced by households in Seguin may help explain why a significantly higher proportion of young experienced high levels of stress in their lives. 20% of young adults and 23% of middle-aged adults in Seguin reported high levels of stress in their lives and these changes may play a significant role in stress. Financial and employment issues commonly tend to affect younger people more than older people.

Doing Things For Ourselves And Others

In the section titled 'Community Inclusion and Co-operation' we measured social cohesion using resident's views of the community they live in, and how that community works together. In this section we look at how residents in the community help one another with basic needs and services. This allows us to measure cohesion within the community on a practical level. Doing things for others contributes to a community not just by providing basic needs and services, but by possibly increasing communication and understanding between residents, which may lead to greater unity.

We looked at some basic household needs, such as wood, vegetables, fruit and game. We asked if residents grew or collected these themselves, and if they gave or received them from others. We also asked about basic skills and services that people within the communities shared. The reports on each community only include those basic needs that are relevant to that community.

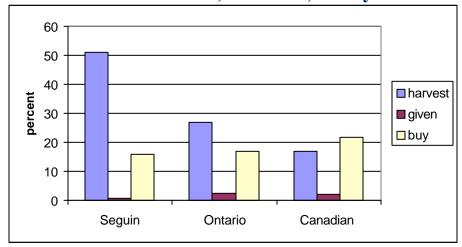

Households that Grow or are Given Vegetables

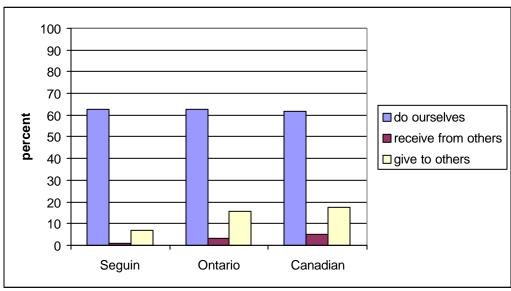

Land-based activities such as growing vegetables and harvesting firewood are not uncommon in Seguin. Vegetable-growing and sharing in Seguin are below the average for the Ontario and Canadian sites. The lower level of sharing may be a result of the low levels of growing.

Firewood is an important source of fuel for residents of Seguin. As seen in the next graph, a total of 72% of respondents use some wood to heat their homes. The harvesting of firewood is much more widespread in Seguin than in the Ontario or Canadian sites. Sharing networks for firewood are at a similar level to the averages for the Ontario and Canadian sites.

Households that Harvest, are Given, or Buy Firewood

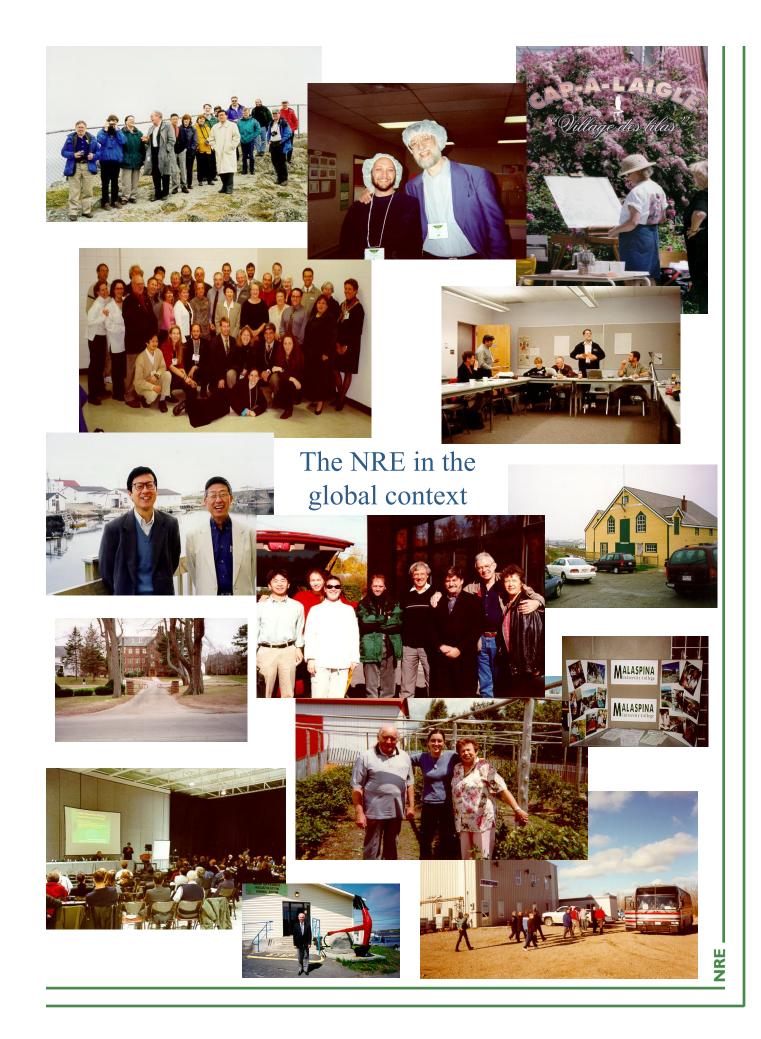

Households that Provide and Receive Skills and Services Free-of-Charge

As a means to measure self-reliance our survey also looked at a number of other activities such as carpentry, painting, and technical work. In the graph above you will see an index which combines several of these variables (specifically painting, sewing, housework, babysitting, repairs, technical help, snow removal and lawn care). The graph reports on the percentage of respondents who do these things themselves, receive them free-of-charge from others or provide them to others free-of-charge.

The graph above shows that people in Seguin carry out a similar level of activities for themselves as respondents in other sites both regionally and nationally. The activities that respondents in Seguin are most likely to do themselves are transportation, housework, and babysitting. The ones respondents are most likely to pay cash for are technical services, automobile/boat repair and snow removal. The graph also shows that people in Seguin do less work free-of-charge for each other than Ontario and Canadian sites. This may indicate a greater availability of commercial services or perhaps less-developed sharing networks than some of the other study communities.

THE NRE RESEARCH SITES IN BRIEF

One of the older coastal communities in Newfoundland, the traditional fishing town of **WINTERTON** is nestled along Trinity Bay on the Northwestern side of the Avalon Peninsula. Winterton is home to approximately 600 people, many of whom are employed by the local fish plant and various service industries in the area. To celebrate its heritage and beauty, the town has established a boat-building museum, and most recently a spectacular board walk.

TWILLINGATE, an island community along the central North Coast of Newfoundland, is said to be the iceberg capital of the world. Home to about 3,000 people, Twillingate has traditionally been one of the most prominent fishing ports in Newfoundland. Although it has felt the effects of the cod moratorium, Twillingate continues to support a growing tourism industry and hosts the internationally acclaimed Fish, Fun and Folk festival every year in July.

Encompassing the communities of Belmont, Central Lot 16 and Southwest Lot 16, **LOT 16** is an unincorporated area located about 15 minutes northwest of Summerside, PEI. With a population of approximately 650 people, Lot 16 is known for its involvement in the agricultural sector as it is home to both dairy and potato farming. Residents of Lot 16 place high value on family and togetherness, with community groups such as the 4H Club, the Women's Institute and the Senior Citizen's Club gathering on a regular basis at local churches and the community hall.

SPRINGHILL, with an approximate population of 4,200 people, is located in the Northwestern part of Nova Scotia. Since the end of its traditional mining backbone, Springhill has been working hard to diversify itself in the areas of tourism, geothermal development and manufacturing. It is home to the Anne Murray Centre, the Miners' Museum and celebrates an annual Irish Festival filled with traditional dancing, music and other cultural events.

BLISSFIELD, an unincorporated parish of about 700 people, is located along the Miramichi River, next to Doaktown. Because it is surrounded by natural resources and spectacular scenery, Blissfield has relied on forestry, fishing and tourism to support the local economy. For six days in July 2000, Blissfield organized the Doaktown Fair and Reunion, a celebration which revived community spirit and encouraged community action.

NEGUAC, a highly bilingual community along the Southern end of New Brunswick's Acadian Peninsula, is home to about 1,700 people. Traditionally, residents of Néguac have relied mainly on the forest and fishing industries for their livelihood, but as these resources become more unstable, the community has been seeking economic support in other areas such as manufacturing and tourism. Through the local Historical Society and events such as Rendez-Vous Néguac, the community is able to promote its heritage.

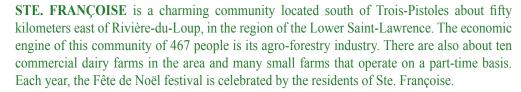

The town of **ST. DAMASE** is located in the St.Lawrence valley, only 45 minutes east of Montréal. The population, currently at about 1,500, has been gradually increasing as St. Damase promotes a solid economic base in agriculture and food processing industries. With numerous social clubs and organizations, along with annual events such the Festival du Maïs, the people of St. Damase encourage togetherness and community spirit.

CAP-A-L'AIGLE is a picturesque little town located on the edge of the St. Lawrence river in Québec, with a population of about 710 people. The community's picturesque nature, tourism and recreation are the main drivers of the economy. However many members of the community work in neighbouring areas. One important event for Cap-à-L'aigle is the Fête des Lilas which includes 3 days of activities to bring the town together.

THE NRE RESEARCH SITES IN BRIEF

TASCHEREAU is a small town in Québec located in Central Abitibi between the communities of La Sarre and Amos. With a population of approximately 640, Tashereau has no shortage of water with 12 lakes and 7 rivers in the immediate area. With an entrance to the beautiful Aiguebelle Park, this town benefits from tourism. Forestry is also an extremely important industry as it employs almost 50% of the community.

Previously a township, **CARDEN**, Ontario has now amalgamated to be part of the City of Kawartha Lakes and is home to approximately 880 people year round. This number swells to over 1,300 in the summer as cottage season takes hold. While many people work outside of Carden, there's a growing aggregate industry here. The Carden Fair and the Alvar Plains are just some of the great reasons to visit.

USBORNE, previously its own township, is now part of the Municipality of South Huron, Huron County. It is located just north of London, Ontario and to the east of Lake Huron. With a population of about 1,500, Usborne's economy is rooted in the cash-crop and livestock industries; in fact, approximately 40% of the workforce is involved with farming. One of the major events which this town enjoys is the Kirkton Fair.

TWEED is a scenic Ontario town located just north of Belleville, between Toronto and Ottawa. It is home to approximately 1,600 people and acts as a service centre to the surrounding rural area. It has a mixed economic base of tourism, retirement functions, retail, and agricultural services. The Heritage Centre and renowned Flowerama Festival are two of Tweed's major attractions.

Located in Northeastern Ontario at the Southern tip of the Parry Sound District, **SEGUIN TOWNSHIP** is a recent amalgamation of several smaller communities. Its permanent population is about 3,400, but this number nearly quadruples as cottagers arrive each Summer. Tourism is one of Seguin's main industries and this beautiful area is not to be missed. Events like the Foley Fall Fair and the Winter Frolic bring the community together.

The Rural Municipality (RM) of **RHINELAND** is a cluster of communities, villages and farms in Southern Manitoba located along the border with North Dakota. The main communities of Altona, Plum Coulee and Gretna are small service centres and home to most of the 4,200 people living in the RM. The vibrant blue, yellow and gold fields in midsummer show Rhineland's strength in agriculture and annual festivals throughout the Summer draw tourists from around the province and the world.

The Municipality of **WOOD RIVER**, located in Southern Saskatchewan southeast of Moose Jaw, is home to about 980 people. Ranching and mixed farming are the main livelihoods in the municipality, and the town of Lafleche acts as the main service centre for the area. From their Crazy Canuk Days in the summer to the Curling Bonspiel in the winter, this community demonstrates a lively spirit year-round.

THE NRE RESEARCH SITES IN BRIEF

Home to approximately 280 people, **SPALDING** is located in Central Saskatchewan, northeast of Saskatoon. This small community acts as the service centre for the larger area of Spalding Rural Municipality. Historically rooted in agriculture, Spalding also has an innovative Geographical Information Systems business which connects truckers to farmers for grain transportation. The Fall Supper and Winterfest are just some of the events which bring community members together.

Home to 150 residents, **FERINTOSH** is located 125km southeast of Edmonton, Alberta. Ferintosh has proved to be a resilient community in the wake of many changes that occurred in the mid 1970's. It was able to adapt by bringing in outside industry (fibre optics terminals and public utility cooperatives) and by maintaining a strong volunteer base. The Church Suppers and the Snowmobile Rally help bring people together to express Ferintosh's community spirit.

HUSSAR, with a population of approximately 160, is located in Southern Alberta about 100km east of Calgary. Its economy is based in agriculture, oil and gas, and Hussar's adjacency to Calgary has also been an influence. The town recently raised money and built a new arena and sports complex. Hussar also celebrates community pride and spirit through such events as the Curling Bonspiel and the Summerdaze Rodeo.

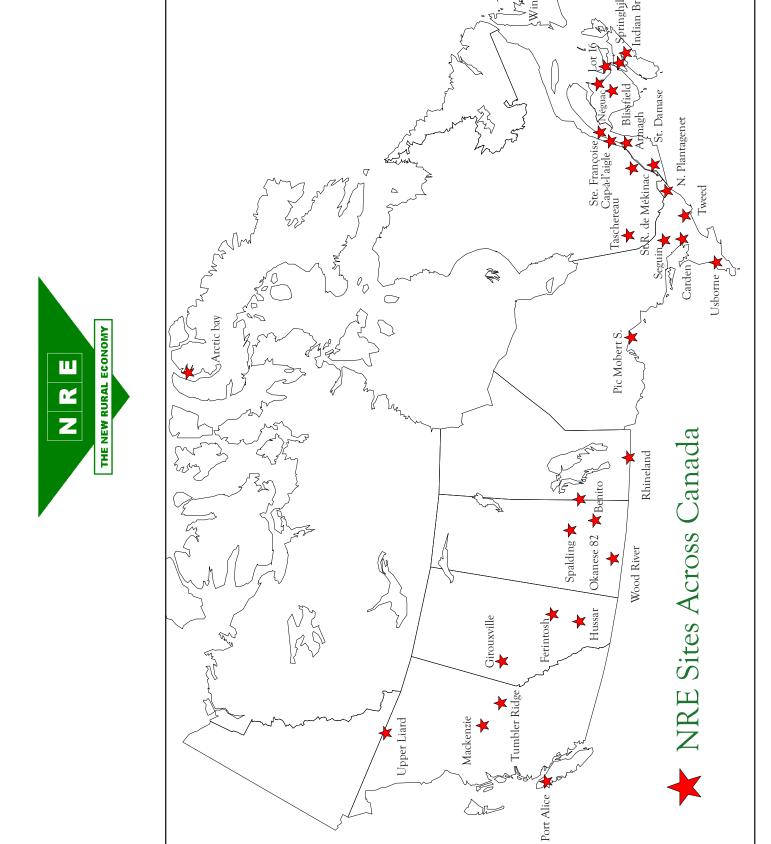

TUMBLER RIDGE, incorporated in 1981, is located in the Eastern foothills of the Rocky Mountains in Northern BC. With an approximate population of 3,000, the town has relied mostly on coal mining but is working hard to diversify to include forestry, oil and gas, and tourism through newly established provincial parks and protected areas. Every August, the annual Grizzly Valley Days is held to promote community togetherness through family activities, sports, and games.

With a population of about 6,000, **MACKENZIE** is located in North Central British Columbia. Its economic base is grounded in forestry and it started out as an "instant town", planned and developed by a forestry company to be a regional processing centre. The annual Alexander Mackenzie Days is just one event which helps to bring Mackenzie's families closer, with entertainment, crafts, and games.

Understanding the New Rural Economy: Options and Choices a project of The Canadian Rural Revitalization Foundation

May, 2002

The New Rural Economy Project (NRE) is a five-year research and education program underway in rural Canada. It is a collaborative undertaking bringing together rural people, policy-analysts, researchers, the business community, and government agencies at all levels to identify and address vital rural issues. It is conducted at the national level with historical and statistical data analysis, and at the local level with case studies involving community and household surveys.

The project will produce:

- **learning forums** to discuss and debate opportunities, options, and choices that include the interests of all rural Canadians and stakeholders;
- documented **recommendations** for long run rural business performance, inclusive development, and public policy; and
- **informed questions** on new issues, unimaginable in the present, but requiring timely answers for the future.

The project is conducted within the framework of 5 social cohesion themes:

- economy
- service
- capacity
- communication
- governance

Since its inauguration in May, 1997 the project has held 10 national workshops and conferences, prepared a number of major reports, established a Centre for Rural Data, profiled 32 carefully selected rural sites for research and education activities, and organized a network of 33 partners, 22 researchers, 19 universities, and 18 government departments across Canada. Through its connection with the Canadian Rural Revitalization Foundation (CRRF), the NRE project has involved over 100 partners and created a research and education network of international stature. Representation from Canada is complemented by colleagues from Europe, Mexico, and Japan.

For further information see the CRRF Web site: www.crrf.ca, the NRE Web page: nre.concordia.ca or contact:
