Mr. Michel Dion, PMP
Project Manager, Bell Helicopter, Mirabel

Difference Between Project Management and Systems Engineering

From my experience in managing engineering projects in the aerospace industry (L-3 Communications / CF-18 and Bell Helicopter), I found out that project management tools and systems engineering tools are somehow complement to each other and necessary in order to achieve the goals. In my search of tools, methodologies and knowledge I became member of PMI as well as the INCOSE. What are the fundamental differences and similarities between the so-called project management and the so-called systems engineering? The intent of this presentation is to start digging in the INCOSE Systems Engineering Handbook and make a comparison with the PMI Book of Knowledge (aka PMBoK). There is a great value at knowing both concepts and bring out the synergy of their application.
